

# MAX AIR SYSTEMS

## Product Update

### MAX FIXAIR DC 1.5 & 3.0

The latest additions to our growing line of self cleaning dust collectors are the **MAX FIXAIR DC 1.5 & 3.0**, available with a variety of arrangements to suit almost any application.

The reverse pulse filter cleaning system in this unit maintains a high filtration efficiency with a constant pressure drop. The system does not need a shutdown period to clean the filters.

The dust collectors can be purchased with or without a blower pack and thus can easily be retrofitted to existing applications as well as new requirements.

Standard configuration would see this unit delivered with support legs, hooper and pail.

All standard accessories including pulse control, explosion venting, return air silencers, to name a few are all available as options.

Stock units are generally available on a quick ship basis at no premium.

The 1.5 & 3.0 model both contain two 80/20 cartridge filters, with washable spun bond as an option. Fire retardant filters are available as well. The unit comes standard with a manual initiate 'off-line' cleaning, but continuous clean is available as well.
