

MAX AIR SYSTEMS

Product Update

Dust Collector Power Module

The **MAX AIR SYSTEMS** EB-6 Power Module is a self-contained modular dust and fume control filter offering enormous flexibility through it's adaptable design. The integrated reverse pulse filter cleaning systems, makes this unit a viable solution for such applications such as sanding, grinding, welding and cutting, to mention but a few.

The ductless design allows for optimum flexibility in the workplace thus not encumbering your productivity. Workers can freely move about the established work environment.

The Power Module would normally be grouped to create a filter wall and this, in conjunction with a walls, ceiling and lights, all serve to create all 'work booth' enclosure where safe, controlled operations can take place
