

EXPERTS IN AIR FILTRATION AND AIR QUALITY MANAGEMENT

**STATE-OF-THE-ART SOLUTIONS FOR
YOUR DEALERSHIP, GARAGE OR BODY SHOP!**

VEHICLE EXHAUST EXTRACTION SYSTEMS

The goal of a vehicle exhaust extraction system is to efficiently capture exhaust fumes at the source and to effectively exhaust them from the building. These exhaust extraction systems help improve the health and safety in the work environment.

We offer different types of exhaust systems so that we may provide the best solution for you:

- Hose reel systems
- Sliding rail systems
- Cord and pulley systems
- Spring recoil balancer systems
- In-ground exhaust systems
- Down the lift systems

ALSO AVAILABLE FOR TRUCK APPLICATIONS:

AIR REPLACEMENT SYSTEMS

The **AIRJET** air replacement system is the most economical way that fresh air can be brought into a building to compensate for process exhaust, negative pressure or simply to complete an air change requirement as well as to provide free cooling and general ventilation.

The **AIRJET** system comprises a powerful inline fan-motor assembly, fresh air and recirculation dampers, controls and a fabric discharge air tube.

The unit economically reclaims heat trapped at the ceiling (roof) level and uses this free energy to preheat the incoming fresh air during the heating season or provides 100% fresh air at other times of the year.

INDUSTRIAL VACUUM SYSTEMS

Designed for the efficient capture of abrasive, toxic, explosive and general dust among others, our vacuums are built for high-end commercial and industrial applications.

High-powered, portable or central vacuum systems can be adapted to vacuum-assisted pneumatic sanders whereby dust is effectively drawn away at the source. These systems can be conceived for single or multiple simultaneous users.

These units provide a cleaner and healthier work environment, reduces clean up time, and reduces sand paper consumption. Increased productivity justifies the cost of this expenditure.

PORTABLE AIR CLEANER

Our portable air cleaner, the **MAX MOBILAIR**, offers you high filtration efficiency with the convenience of portability as these units can be moved as the workflow dictates. Conceived for the control of dust, smoke and other airborne contaminants, the filter system is capable of capturing and filtering particles as small as .5 microns.

Robustly designed and constructed, the **MAX MOBILAIR** will stand up and perform in the harshest environments and continue to offer the highest level of satisfaction throughout the life of the equipment.

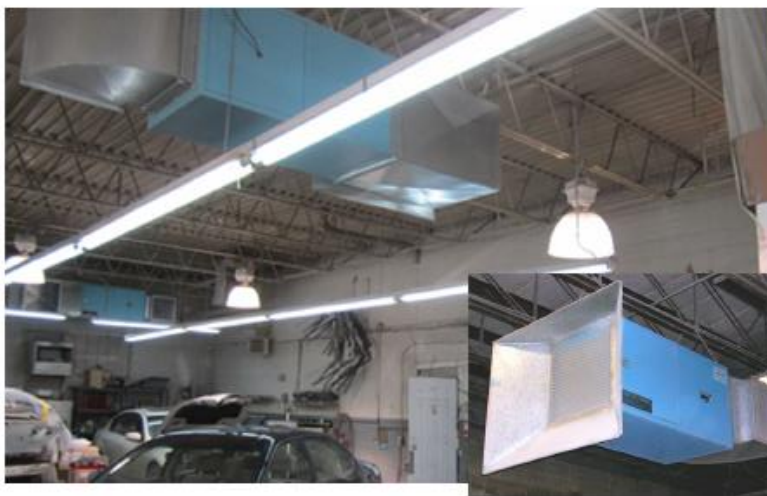

The mobile dust collector is also offered with a downdraft table instead of a source capture arm.

DOWNDRAFT TABLES

The **MAX-DD** downdraft tables offer extremely high capture velocities through a variety of surfaces that capture smoke and particulate from applications such as sanding, welding, grinding, and more.

The **MAX-DD** is available in stationary or mobile arrangements, with varied sizes and performances to suit most applications, and they come with filter cleaning options to ensure top performance. We offer conventional filter downdraft tables or wet downdraft tables for combustible dust. Customized tables are also available for specific application requirements

SUSPENDED AIR FILTRATION UNITS

With the installation of **MAX 2400** industrial air cleaners, a moving ceiling of air is created and effectively captures and controls airborne contaminants before they have a chance to settle on the work surfaces within the space, or inhaled by the workers. A lightweight construction and a 110 volt connection makes for a simple installation at the ceiling or on the walls or columns.

Typical applications are body repair shops, warehouses and manufacturing facilities.

HEAT RECOVERY SYSTEMS

DESTRATAIR is the perfect solution to equalize floor to ceiling temperatures and reduce heat loss through the roof. They offer many advantages such as:

- Comfortable work space
- Substantial energy savings
- Easy, low level installation
- No duct work
- Very quiet operation

DESTRATAIR is altering the way air temperature equalization can be achieved!

**DUST AND FUME COLLECTORS - MIST EXTRACTORS - SOURCE CAPTURE ARMS -
PORTABLE AIR CLEANERS - DOWNDRAFT TABLES - ENVIRONMENTAL BOOTHS
- INDUSTRIAL AIR CLEANER - BLOWERS - FANS - AIR REPLACEMENT SYSTEMS
- TEXTILE AIR TUBES - DESTRATIFICATION SYSTEMS - INDUSTRIAL VACUUMS
SMOKE CONTROL FOR CUTTING TABLES**

**A full line of equipment to guarantee a safe, healthy,
comfortable and clean work environment.**

Texas Electronics is a manufacturer and distributor of air management and air filtration solutions since 1976. We deal with some of the industry's most advanced products in the area of dust and fume extraction, vehicle exhaust removal, air replacement, industrial vacuum systems and heat recovery through destratification. Through our 39 years in business, we have designed systems that have been installed throughout North America, Latin America, Europe and the Middle-East. Our engineers would be glad to assist you in any system design that you or your clients might be considering.
